

Polygonatum Biflorum

Solomon-seal

This plant can create a bold textural effect in a variety of soil and moisture conditions. The tall arching stems make an attractive accent in a woodland garden, especially when massed. In fall, the leaves turn yellow, contrasting with blue-black berries. In spring, small tubular white or green-white flowers dangle from the stem.

Suggested Companions: Pennsylvania sedge (*Carex pensylvanica*), woolly blue violet (*Viola sororia*), yellow trout lily (*Erythronium americanum*), flowering dogwood (*Cornus florida*), white oak (*Quercus alba*), hickories (*Carya* sp.)
